Education

Koneru Lakshmaiah Educational Foundation **Sep 2024 – May 2028**

Bachelor of Science in Computer Science *Guntur, Andhra Pradesh*

Coding Profiles

- **CodeChef** : codechef.com/users/klu2400031275
- **LeetCode**: leetcode.com/u/2400031275
- Regularly solving Data Structures and Algorithms problems to improve algorithmic thinking and coding efficiency.

Relevant Coursework

- Data Structures
- Analysis of Algorithms
- Artificial Intelligence
- Operating Systems
- Database Management Systems
- Computer Networks

Projects

StayFinder |Live |Github React, Node.js, Express.js, PostgreSQL

- Built a full-stack property booking platform enabling users to browse, search, and reserve rental properties with 5+ core features including listings, filtering, and booking management.
- Created a responsive React interface with 10+ reusable components for property listings, search filters, and booking workflows.
- Implemented RESTful backend services using Node.js and Express.js to manage user authentication, property listings, and booking operations.
- Structured a PostgreSQL database with 4+ relational tables to store user accounts, property details, booking history, and availability data.

AI-Builders |Live |Github PERN Stack

- Engineered a prompt-based website generator that converts natural language prompts into responsive web pages using React, Node.js, Express, and PostgreSQL.
- Designed an interactive React frontend with 10+ reusable components enabling real-time preview of generated websites.
- Constructed RESTful APIs with Node.js and Express to process prompts and automate website generation workflows.
- Integrated AI APIs to generate structured HTML/CSS layouts and organized PostgreSQL tables to store prompts and generated website data.

SplitMate |Live |Github ***Full-Stack Web***

- Developed a responsive expense-sharing platform that helps users manage shared expenses and split costs among friends or groups.
- Designed an intuitive user interface for creating groups, recording expenses, and tracking individual contributions.
- Implemented expense management workflows to simplify shared cost calculations and improve transparency among group members.
- Deployed the application using Render and configured the project for web-based access.

Technical Skills

- **Languages**: Python, Java, C, JavaScript, SQL, HTML/CSS
- **Developer Tools**: VS Code, Eclipse, PyCharm, Spring Tool Suite, Google Cloud Platform
- **Technologies**: Linux, Git, GitHub

Hackathons

- Competed in Smart India Hackathon (2026), collaborating with a team to design and develop an software prototype within a limited time frame.
- Contributed to Amaravati Quantum Valley Hackathon (2025) by developing technology-driven concepts and rapid prototypes in a competitive environment.
- Participated in a Frontend Hackathon (2024), building responsive web interfaces using HTML, CSS, and JavaScript.
